Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the

Art Unit: 1793

applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-11 are rejected under 35 U.S.C. 102(e) as being anticipated by U. S.

Pat. 7,332,135 B2 to Gandhi et al.

The abstract and Fig. 2 in the Gandhi patent disclose a catalyst system that simultaneously removes ammonia and enhances net NO_x conversion by placing an ammonia-SCR catalyst downstream of a lean NO_x trap. By doing so, the ammonia-SCR catalyst absorbs the ammonia from the upstream lean NO_x trap generated during rich pulses. The stored ammonia then reacts with the NO_x emitted from the upstream lean NO_x trap - enhancing the net NO_x conversion rate significantly while depleting the stored ammonia.

Col. 3 Ins. 58-59 discloses that the lean NO_x trap and the ammonia-SCR catalyst can be incorporated into a single substrate.

Col. 6 Ins. 63-65 discloses that the lean NO_x trap includes platinum as the precious metal. Col. 7 Ins. 5-9 also discloses that the lean NO_x trap includes alkali or alkaline earth metals such as barium, cesium, and/or rare earth metals such as cerium and/or a composite of cerium and zirconium.

Col. 7 Ins. 34-43 discloses that the ammonia-SCR catalyst may be a base metal such as copper, iron and/or cerium supported on a support such as zeolite.

Col. 9 In. 66 to col. 10 In. 4 discloses that the washcoat may be incorporated into a porous substrate for filtering diesel particulate matter. Thus, this lean NO_x

Art Unit: 1793

trap/ammonia-SCR catalyst concept can be integrated into diesel particulate matter devices (i. e. the Applicants' "wall flow filter").

References Made of Record

The following additional references from the examiner's search are made of record:

U. S. Pat. 7,334,400 B2 disclosing an exhaust gas treatment system that includes an upstream lean NO_x trap and a downstream SCR catalyst, and

U. S. Pat. 6,455,463 B1 disclosing an alkaline earth/transition metal lean NO_x catalyst.
